Application/Control Number: 09/854,674

Art Unit: 2633

- 1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 2. Claims 2, 3, 5 and 6 are rejected under 35 U.S.C. 103(a) as being unpatentable over Javitt et al (6,031,648).

Javitt et al discloses an optical transmitter (220,210,230,240) for use in a multichannel video optical transmission system, which converts a multi-channel video signal (f2-fN, Fig. 2) into an optical signal (252, Fig. 2)) and transmits the converted optical signal through an optical fiber (250, Fig. 2) to an optical receiver (270,280,290,300,310,320,330,340), the optical transmitter comprising: pilot signal generating means (210) for generating a pilot signal to be superimposed on the multi-channel video signal (f2-fN) inputted; and electrical-optical converting means (240) for converting the pilot signal superimposed multi-channel video signal into an optical signal (252, Fig. 2) and further for putting the converted optical signal out to the optical fiber (250). The receiver further comprises an amplifier (280) and an optical-electrical converter (270).

It is well known in the art to provide a frequency modulator in the pilot signal generating means to modulate a frequency of the pilot signal for modulating a frequency of an intermodulation distortion occurring at frequencies corresponding to the sum of and difference between a frequency of each carrier of multi-channel input signal and a frequency of said pilot signal.

Art Unit: 2633

3. Claims 1 and 4 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Hung N Ngo whose telephone number is (703) 308-0297. The examiner can normally be reached on M-F (8:30-5:00).

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Jason Chan can be reached on 703-305-4729. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9314.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
